

# Master Lock

**Eddie Martinez**  
employed since 2009

Individually-Keyed Master Lock® padlocks are made with dielectric Xenoy thermoplastic body guards against electrocution and resist corrosion from chemicals or moisture in industrial environments.

Key cannot be removed when padlock is open, eliminating any chance of padlock being left unlocked when locking-out. Xenoy padlocks have a slim body that fits all lock-out hasps and take up less storage space, with 1-3/4”h x 1-1/2” dimensions.

- Shackle length is 1-1/2”, 1/4” diameter, non-hardened shackle can be cut in any emergency.
- Each lock is supplied with one key, per OSHA.
- 6-pin cylinder offers 10,000 key changes to prevent duplication
